

The Buzz About Electric Vehicles

Michael: Hey Sarah! Haven't seen you around for a while. What have you been up to?

Sarah: 190 nations and organizations have pledged to quit coal at COP26, so I decided to quit my gasoline-powered Range Rover and I've been electric car shopping. Any suggestions on how I should go about this?

Michael: You know I have a Tesla Model S and love it, and the allure of the electric vehicle has never been stronger for sure.

Sarah: It seems impossible to talk about electric cars without talking about Tesla. No offense, Michael, I'm sure your Tesla Model S is great, but I feel like considering something different.

Michael: No problem. There's a real explosion in choice. Everybody, and I mean everybody, is piling into the market. Several new ones hit the roads early this year, for example Volvo's XC40 and Audi's Q4 e-tron for 2022. If you want a splash, there is also Porsche's Taycan.

Sarah: Anything else to keep in mind?

Michael: You want to consider your charging plan. The first step is to determine where you will typically charge your car. Most people do it at home, which is easiest.

Sarah: I will too for sure. Sorry to cut this short, but I got to go. Thanks so much for the makes and models of the cars you mentioned.

Michael: Good luck with your electric car shopping! Feel free to give me a buzz anytime!
